                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence Sequence 5

Sequence of the S gene from a virulent British field isolate of
"Sequence of the S gene from ";
Virus Res. 18:71-80(1990).
-!- FUNCTION: The peplomer protein mediates the binding of virions to
the host cell receptor and is involved in membrane fusion and in
syncytium formation.

Patent No. 5942433
GENERAL INFORMATION:
APPLICANT: VINSON, Charles R.
APPLICANT: KRYLOV, DMILTY
TITLE OF INVENTION: EXTENSION OF A PROTEI
TITLE OF INVENTION: ELLULAR PROTEIN
TITLE OF INVENTION: CELLULAR PROTEIN
NUMBER OF SEQUENCES: 60
CORRESPONDENCE ADDRESS:
ADDRESSEE: MORGAN & FINNEGAN, L.L.P.
STREET: 345 Park Avenue
CONTY: NOW YORK
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Best Local Similarity 37.1

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 8025, Application US/09328352
Patent No. 6562958
GENERAL INFORMATION:
FOR THE SEQUENCES RELATING TO ACINETOBACTER TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO ACINETOBACTER TITLE OF INVENTION: BAUMANNII FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: GT-99-03P8
CURRENT APPLICATION NUMBER: US/09/328,352
CURRENT FILING DATE: 1999-06-04
NUMBER OF EM 1999-06-04
NUMBER OF SEQ ID NOS: 8252
LENGTH: 232
                                                            APPLICANT: Marc J. Rubenfield et al.

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: AERUGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
CURRENT APPLICATION NUMBER: US 60/074,788
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR FILING DATE: 1999-02-18
PRIOR FILING DATE: 1999-02-18
PRIOR FILING DATE: 1998-07-27
NUMBER OF SEQ ID NOS: 33142
SEQ ID NO 28902
LENGTH: 373
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 7488, Application US/09328352

Patent No. 6562958

Patent No. 6562958

APPLICANT: Gary L. Breton et al.

"Human bullous pemphigoid antigen (BPAG1). Amino acid sequences
deduced from cloned cDNAs predict biologically important peptide
segments and protein domains."

J. Biol. Chem. 266:17784-17790(1991).

-:- FUNCTION: Cytoskeletal linker protein. Anchors keratin-containing
intermediate filaments to the inner plaque of hemidesmosomes. The
proteins may self-aggregate to form filaments or a two-dimensional
mesh (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Nakajima D., Okazaki N., Yamakawa H., Kikuno R., Ohara O., Nagase T., "Construction of expression-ready cDNA clones for KIAA genes: manual curation of 330 KIAA clones.";

Note=NO experimental confirmation available;
Note=NO experimental confirmation available;
-!-ISSUE SPECTFICTY: Highly expressed in skeletal muscle and cultured keratinocytes.
-!-BASAE: BARAI: Ba nautoantigen of bullous pemphigoid
-!-SIMILARITY: Belongs to the plakin or cytolinker family.
-!-SIMILARITY: Contains 2 EF-hand calcium-binding domains.
-!-SIMILARITY: Contains 29 spectrin repeats.

                                                                                                                                                                                                                                                                                                                                 -!- FUNCTION: Cytoskeletal linker protein. Anchors keratin-containing intermediate filaments to the inner plaque of hemidesmosomes. The proteins may self-aggregate to form filaments or a two-dimensional mesh (By similarity).
-!- SUBUNIT: Homodimer. Interacts with the neuronal intermediate filament protein, Proh (By similarity).
-!- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).
